

Harvest Revival Full Gospel Baptist Church
11933 Springfield Blvd. Cambria Hgts. NY 11411

To whom it may Concern:

This church has historically experienced high humidity levels. Therefore, we operated the window air conditioners in the sanctuary for extended periods to help reduce humidity.

In addition, we operated a dehumidifier in the basement throughout the day to control the humidity in that area.

After installing the mini-split heat pump systems, we no longer need to use the window air conditioners. Instead, we operate the mini-split heat pumps using their dehumidification function to help reduce humidity.

We also occasionally open the windows to allow fresh outdoor air to circulate throughout the building. As a result, the humidity level inside the church has been significantly reduced, creating a more comfortable environment for occupants.

We would like to thank Sky HVAC NY Inc. for completing the replacement project, which has helped reduce the humidity level in the church while also contributing to lower electricity consumption.
